

Preface: Current Themes in Engineering Science 2010, The multi-disciplinarity of Engineering Science Alexander M. Korsunsky	1
Design of brakes—an object-oriented approach John A. Akpobi	3
The evaluation of the stress intensity factor during crack-microcrack interaction using complex variables method and photoelasticity Hadda Hadjab	19
Analysis and optimization of an innovative fatigue tests profile for three axle semi-trailers H. Malon, L. Tello, and C. Martin	26
Investigation of motorcycle steering torque components V. Cossalter, R. Lot, M. Massaro, and M. Peretto	35
Improvement of statistical decisions under parametric uncertainty Nicholas A. Nechval, Konstantin N. Nechval, Maris Purgailis, Gundars Berzins, and Uldis Rozevskis	47
Performance of infinitely wide parabolic and inclined slider bearings lubricated with couple stress or magnetic fluids Mobolaji Humphrey Oladeinde and John Ajokpaoghene Akpobi	58
On the construction of electrical current density vectors for inhomogeneous media M. P. Ramirez T., E. Bernal F., J. J. Gutierrez C., and V. D. Sanchez N.	69
Effects of architecture, density and connectivity on the properties of trabecular bone: A two-dimensional, Voronoi cell based model study Osvaldo Ruiz, Rafael Schouwenaars, Edgar I. Ramirez, Victor H. Jacobo, and Armando Ortiz	77
Oxidation resistance of Fe₈₀Cr₂₀ alloys treated by rare Earth element ion implantation Darwin Sebayang, Deni S. Khaerudini, H. Saryanto, Sulaiman Hasan, M. A. Othman, and Puji Untoro	90
Modeling and experimental investigations of dry electrical discharge machining (DEDM) Grzegorz Skrabalak and Jerzy Kozak	103
Investigation of the structure of human dental tissue at multiple length scales using high energy synchrotron X-ray SAXS/WAXS Tan Sui, Gabriel Landini, and Alexander M. Korsunsky	113
Author Index	125
